

Client/Institute Name	:	KIOT – SDET 2026
Course	:	Automation Testing with Selenium
Technical Assessment	:	02
Module	:	TestNG and Page Object Model, Data Driven Testing, Logging and Listener
Date	:	28-Apr-26
Time	:	01:30 P.M – 04:30 P.M
Duration	:	3 h
Total Marks	:	50 Marks

Part A – 1 x 10 = 10 Marks

Part B Test Automation — Practical Total (40 Marks)

Use the following application for all automation tasks below.

<https://automationexercise.com> — a free e-commerce demo site suitable for automation practice.

Q1_Test 1 - User Registration & Login Scenarios 15 Marks

Automate the following 4 test cases for the registration and login flows. Use valid credentials where required and capture them in an Excel sheet via Apache POI for use as a data provider.

1.1 Register a new user with valid details and assert the account creation success message is displayed.

1.2 Attempt to register with an email address that already exists and assert the appropriate error message is shown.

1.3 Login with a valid registered user and assert the user's name appears in the navigation bar after login.

1.4 Login with an invalid email and password combination and assert the error message "Your email or password is incorrect!" is displayed.

Requirements

- Maven project with Page Object Model (POM) design pattern and Page Factory
- Custom ITestListener for logging pass/fail/skip events to console

- ▶ Assign priority 1–4 to test cases 1.1 through 1.4 respectively
- ▶ Test data (email, password, name) supplied via @DataProvider reading from an Excel sheet (Apache POI)
- ▶ SequentialRun all 4 tests sequentially
- ▶ ParallelRun all 4 tests in parallel (thread-count = 2) using testing.xml ; use ThreadLocal<WebDriver> for thread safety

Q2 Test 2 - Product Search, Wishlist & Checkout Flow 20 Marks

Automate an end-to-end shopping journey covering search, wishlist, cart operations, and full checkout with payment.

2.1 Search for a product by keyword, verify the results page displays at least one matching product, and assert the product name contains the search term.

2.2 Add a product to the Wishlist and assert it appears on the Wishlist page with correct name and price.

2.3 Move the product from the Wishlist to the Cart, verify it is present in the cart, then proceed through the full checkout — fill in delivery address, select payment method, and assert the "Order Placed!" confirmation is displayed.

Requirements

- ▶ Maven project with POM design pattern, Page Factory, and ITestListener
- ▶ Log4j2 integration — configure an appender to write logs to both console and a rolling file (logs/test-execution.log)
- ▶ Dependency dependsOnMethods: 2.2 depends on 2.1 passing; 2.3 depends on 2.2 passing
- ▶ Soft Assert In test 2.3, intentionally assert an incorrect order confirmation message using SoftAssert so the test continues running and reports the failure at the end via assertAll()
- ▶ Capture a screenshot on every test failure inside the Listener and save it to screenshots/folder with a timestamp in the filename

Q3: Create Selenese commands to replicate the given scenario. (5 marks)

- a) open <https://tutorialsninja.com/demo/>
- b) Verify the iPhone's price is same in both home page and product page

- c) Get the description of the iphone and print it
- d) Try printing the iphone's price in console output
