Question 1

Correct

Mark 1.00 out of 1.00

Flag question

In Cucumber BDD, what is the primary purpose of a Feature File?

☐ 1.

To write unit test assertions and helper utilities

☒ 2.

To contain human-readable test scenarios written in Gherkin syntax describing system behaviour ✓

☐ 3.

To store browser configuration and Playwright launch options

☐ 4.

To define database schemas used during integration tests

Your answer is correct.

The correct answer is: To contain human-readable test scenarios written in Gherkin syntax describing system behaviour

Question 2

Correct

Mark 1.00 out of 1.00

Flag question

What is a Scenario Outline in Cucumber used for?

☒ 1.

To run a single scenario multiple times with different data sets from an Examples table ✓

☐ 2.

To outline the high-level architecture of the test framework

☐ 3.

To execute all scenarios in a feature file in parallel

☐ 4.

To group multiple feature files under a single parent scenario

Your answer is correct.

The correct answer is: To run a single scenario multiple times with different data sets from an Examples table

Question 3

Correct

Mark 1.00 out of 1.00

Flag question

In the Gherkin language, which keyword is used to describe the initial context or pre-condition of a scenario?

☐ 1.

When

☐ 2.

Then

☐ 3.

And

☒ 4.

Given ✓

Your answer is correct.

The correct answer is: Given

Question 4

Correct

Mark 1.00 out of 1.00

Flag question

What is the role of a Step Definition file in a Cucumber project?

☐ 1.

It stores browser automation scripts written in Java

☒ 2.

It maps Gherkin steps to actual executable automation scripts code ✓

☐ 3.

It contains the feature scenarios in Gherkin format

☐ 4.

It configures the Cucumber runner and report format

Your answer is correct.

The correct answer is: It maps Gherkin steps to actual executable automation scripts code

Question 5

Correct

Mark 1.00 out of 1.00

Flag question

Which Cucumber hook executes code AFTER every scenario, typically used for browser teardown?

☐ 1.

BeforeAll

☐ 2.

BeforeStep

☒ 3.

After ✓

☐ 4.

AfterAll

Your answer is correct.

The correct answer is: After

Question 6

Correct

Mark 1.00 out of 1.00

Flag question

Which of the following is a Cucumber option that can be used to specify the path to the step definition files?

☐ 1.

–tags

☐ 2.

–strict

☐ 3.

–format

☒ 4.

–glue ✓

Your answer is correct.

The correct answer is: –glue

Question 7

Correct

Mark 1.00 out of 1.00

Flag question

Which of the following correctly describes a Cucumber Data Table?

☐ 1.

A tag expression that filters which scenarios to run based on environment

☒ 2.

A tabular structure passed inline to a step, used to supply multiple key-value parameters in one step ✓

☐ 3.

A CSV file attached to a feature file for external data loading

☐ 4.

An HTML report generated at the end of a Cucumber test run

Your answer is correct.

The correct answer is: A tabular structure passed inline to a step, used to supply multiple key-value parameters in one step

Question 8

Correct

Mark 1.00 out of 1.00

Flag question

Which Cucumber tag expression would run ONLY scenarios tagged with both @smoke and @regression?

☐ 1.

@smoke or @regression

☒ 2.

@smoke and @regression ✓

☐ 3.

@smoke, @regression

☐ 4.

@smoke | @regression

Your answer is correct.

The correct answer is: @smoke and @regression

Question 9

Correct

Mark 1.00 out of 1.00

Flag question

Which plugin is used in Cucumber to store failed scenarios for re-execution?

☐ 1.

pretty

☐ 2.

rerun:failed

☒ 3.

rerun:target/rerun.txt ✓

☐ 4.

html:target/report.html

Your answer is correct.

The correct answer is: rerun:target/rerun.txt

Question 10

Correct

Mark 1.00 out of 1.00

Flag question

How can failed scenarios be rerun in Cucumber using the rerun plugin output file?

☐ 1.

By adding @failed tag manually

☒ 2.

By using features = "@target/rerun.txt"r ✓

☐ 3.

By using plugin = "failed"

☐ 4.

By enabling dryRun = true

Your answer is correct.

The correct answer is: By using features = "@target/rerun.txt"r
