Question 1

Correct

Mark 1.00 out of 1.00

Flag question

Which Python Selenium statement correctly launches a Chrome browser and navigates to a URL?

- ☒ A. driver = webdriver.Chrome(); driver.get('https://example.com') ✓
- ☐ B. driver = webdriver.Chrome(); driver.open('https://example.com')
- ☐ C. driver = Chrome(); driver.navigate('https://example.com')
- ☐ D. driver = webdriver.launch('chrome'); driver.get('https://example.com')

Your answer is correct.

The correct answer is: driver = webdriver.Chrome(); driver.get('https://example.com')

Question 2

Incorrect

Mark 0.00 out of 1.00

Flag question

In Python Selenium, which method is used to navigate back to the previous page, equivalent to clicking the browser's Back button?

- ☒ A. driver.navigate().back() ✗
- ☐ B. driver.back()
- ☐ C. driver.navigate.back()
- ☐ D. driver.execute_script('history.back()')

Your answer is incorrect.

The correct answer is: driver.back()

Question 3

Correct

Mark 1.00 out of 1.00

Flag question

An Test Engineer you set implicitly_wait(10) and also applies an explicit WebDriverWait of 5 seconds on the same element. What is the effective wait behaviour?

- ☐ A. Implicit wait overrides explicit wait since it is set globally.
- ☐ B. They add up, resulting in a total wait of 15 seconds.
- ☐ C. Both waits run in parallel; whichever completes first wins.
- ☒ D. Explicit wait takes precedence; the implicit wait is suppressed for that condition ✓

Your answer is correct.

The correct answer is: Explicit wait takes precedence; the implicit wait is suppressed for that condition

Question 4

Incorrect

Mark 0.00 out of 1.00

Flag question

To retrieve the text of the cell at row 3, column 2 of an HTML table with id='data-table', which code fragment is most efficient?

- ☐ A. Both A and B are correct and equally efficient
- ☒ B. driver.find_element(By.XPATH, '//table[@id="data-table"]/tbody/tr[3]/td[2]').text ✗
- ☐ C. driver.find_element(By.CSS_SELECTOR, '#data-table tr:nth-child(3) td:nth-child(2)').get_attribute('textContent')
- ☐ D. driver.find_elements(By.TAG_NAME, 'td')[5].text

Your answer is incorrect.

The correct answer is: Both A and B are correct and equally efficient

Question 5

Correct

Mark 1.00 out of 1.00

Flag question

Which ActionChains sequence correctly performs a drag-and-drop from source_element to target_element?

- ☐ A. ActionChains(driver).click_and_hold(source).move_to_element(target).release().perform()
- ☐ B. ActionChains(driver).drag_and_drop(source, target).perform()
- ☐ C. ActionChains(driver).move_to_element(source).click_and_hold().move_to_element(target).release().perform()
- ☒ D. All of the above are valid approaches ✓

Your answer is correct.

The correct answer is: All of the above are valid approaches

Question 6

Incorrect

Mark 0.00 out of 1.00

Flag question

After clicking a link that opens a new browser tab, which code correctly switches focus to the newly opened window?

- ☐ A. driver.switch_to.window(driver.window_handles[1])
- ☐ B. driver.switch_to.new_window('tab')
- ☐ C. driver.switchTo().window(driver.getWindowHandles().get(1))
- ☒ D. driver.switch_to_window(driver.get_window_handles()[1]) ✗

Your answer is incorrect.

The correct answer is: driver.switch_to.window(driver.window_handles[1])

Question 7

Correct

Mark 1.00 out of 1.00

Flag question

A page has a parent iframe (id='parent-frame') containing a child iframe (id='child-frame'). To interact with an element inside the child frame, what is the correct switching sequence?

- ☒ A. driver.switch_to.frame('parent-frame'); driver.switch_to.frame('child-frame') ✓
- ☐ B. driver.switch_to.frame('parent-frame.child-frame')
- ☐ C. driver.switch_to.frame('child-frame')
- ☐ D. driver.switch_to.nested_frame(['parent-frame', 'child-frame'])

Your answer is correct.

The correct answer is: driver.switch_to.frame('parent-frame'); driver.switch_to.frame('child-frame')

Question 8

Correct

Mark 1.00 out of 1.00

Flag question

While automating an auto-suggest search box, the suggestion dropdown is not visible when the script runs. What is the most robust solution?

- ☐ A. Use time.sleep(3) after typing to wait for suggestions to appear.
- ☒ B. Use WebDriverWait until visibility_of_all_elements_located for the suggestion list container. ✓
- ☐ C. Use implicitly_wait(5) before interacting with the suggestion list.
- ☐ D. Use driver.refresh() after typing and re-check for suggestions.

Your answer is correct.

The correct answer is: Use WebDriverWait until visibility_of_all_elements_located for the suggestion list container.

Question 9

Incorrect

Mark 0.00 out of 1.00

Flag question

A test encounters a JavaScript confirm dialog. The test must click 'Cancel'. Which code is correct?

- ☐ A. driver.switch_to.alert().cancel()
- ☒ B. Alert(driver).dismiss() ✗
- ☐ C. driver.find_element(By.XPATH, '//button[text()="Cancel"]').click()
- ☐ D. driver.switch_to.alert.dismiss()

Your answer is incorrect.

The correct answer is: driver.switch_to.alert.dismiss()

Question 10

Correct

Mark 1.00 out of 1.00

Flag question

A web-based modal dialog (Bootstrap modal, not a JS alert) blocks element interaction on the main page. What is the correct Selenium approach?

- ☐ A. driver.switch_to.alert.accept()
- ☐ B. driver.switch_to.frame('modal')
- ☒ C. Wait for the modal to be visible, then interact with its DOM elements directly using standard locators. ✓
- ☐ D. driver.switch_to.default_content() before clicking modal buttons

Your answer is correct.

The correct answer is: Wait for the modal to be visible, then interact with its DOM elements directly using standard locators.
