

Client/Institute Name	:	Expleo/KIOT
Course	:	SDET
Technical Assessment	:	26
Module	:	Playwright – BDD Cucumber
Date	:	08-Jul-26
Time	:	02:00 P.M – 05:00 P.M
Duration	:	3 Hours
Total Marks	:	50 Marks

Part A – Multiple Choice Questions (1 × 10 = 10 Marks)

Part B – Practical Assessment (40 Marks)

Build an automation framework using Playwright, Cucumber, and TypeScript that satisfies the requirements below.

1. Feature Files (2 Features Required)

- Register.feature — Scenario: Register a new user on <https://demowebshop.tricentis.com/register>. Fill in the required data and validate successful registration.
- Login.feature — Scenario Outline: Login validation with multiple credentials, driven by a CSV file containing valid and invalid credential sets. Validate the success message for valid credentials and the corresponding error message for invalid credentials.

2. Framework Requirements

- Implement the Page Object Model (POM) design pattern together with Cucumber World concepts.
- Use a Scenario Outline with an Examples table (or external CSV) to drive the data-driven Login scenario.
- Use Cucumber hooks (Before, After) to set up and tear down the browser/page; capture and attach a screenshot to the report on both pass and failure.
- Generate multiple Cucumber JSON reports — one per feature or per scenario — rather than a single consolidated report.
- Use an external CSV file to supply test data for the Register scenario.

3. Deliverables

- Complete source code (feature files, step definitions, page objects, world/hooks, config).
- CSV data file(s) used for Register and Login scenarios.
- Generated Cucumber JSON report(s) and any screenshots captured during execution.
- README.md with setup and execution instructions.

Marking Scheme — Part B (40 Marks)

Criteria	Marks
Feature files with correct Gherkin syntax (Register.feature, Login.feature)	5
Scenario Outline and CSV-driven data	10
Step definitions using proper, resilient locators	5
Page Object Model (POM) implementation	5
Cucumber World & Hooks for browser/page setup and teardown (with screenshots)	5
Multiple Cucumber JSON reports generated (per feature / scenario)	5
Successful test execution with correct validations	5
