Question **1**

Correct

Mark 1.00 out of 1.00

Flag question

What will re.findall(r'\d+', "ERR 404: Timeout after 30s on port 8080") return?

☐ A. ['ERR', 'Timeout', 'port']

☒ B. ['404', '30', '8080'] ✓

☐ C. ['ERR', '30', 'port']

☐ D. ['404']

Your answer is correct.

The correct answer is: ['404', '30', '8080']

Question **2**

Correct

Mark 1.00 out of 1.00

Flag question

How many local and global variables are there in the following Python snippet

```
var1 = 5

def fn():

    global var1

    var1 = 2

    var2 = var1 + 5

fn()
```

☐ A. Two global variables and One Local variable

☒ B. One global variable and One Local variable ✓

☐ C. Two Local variables

☐ D. One global variables and Two Local variables

Your answer is correct.

The correct answer is: One global variable and One Local variable

Question **3**

Correct

Mark 1.00 out of 1.00

Flag question

A test data duplication script runs: result = set([1, 2, 2, 3, 3, 3]) | {4}. What does result contain?

☐ A. {4}

☐ B. {1, 2, 3}

☐ C. {1, 2, 2, 3, 3, 3, 4}

☒ D. {1, 2, 3, 4} ✓

Your answer is correct.

The correct answer is: {1, 2, 3, 4}

Question **4**

Correct

Mark 1.00 out of 1.00

Flag question

A log-parser script builds a response-time list: times = [120, 340, 89, 210]. After times.pop(1) and times.insert(1, 95), what is the final list?

☐ A. [120, 340, 89, 95]

☐ B. [120, 89, 95, 210]

☒ C. [120, 95, 89, 210] ✓

☐ D. [120, 340, 95, 89, 210]

Your answer is correct.

The correct answer is: [120, 95, 89, 210]

Question **5**

Correct

Mark 1.00 out of 1.00

Flag question

In a test framework, a Driver base class defines launch(). ChromeDriver and FirefoxDriver both override launch() with browser-specific logic. This design demonstrates which OOP principle?

☐ A. Method Overloading

☐ B. Abstraction

☒ C. Polymorphism (method overriding via inheritance) ✓

☐ D. Encapsulation

Your answer is correct.

The correct answer is: Polymorphism (method overriding via inheritance)

Question **6**

Correct

Mark 1.00 out of 1.00

Flag question

A TestCase class is defined with __init__(self, test_id, priority, status="PENDING"). What is the primary role of this constructor?

☐ A. To define the class in memory

☒ B. To initialize instance attributes when an object is created ✓

☐ C. To validate class-level constraints

☐ D. To delete the object after use

Your answer is correct.

The correct answer is: To initialize instance attributes when an object is created

Question **7**

Incorrect

Mark 0.00 out of 1.00

Flag question

A payment gateway script processes transactions. What will be the output of the following code when amount = -500?

```
def process_payment(amount):

    try:

        if amount <= 0:

            raise ValueError("Invalid amount")

        result = 10000 / amount

        return result

    except ValueError as e:

        print(f"Payment Error: {e}")

        return -1

    except ZeroDivisionError:

        print("Division Error")

        return 0

    finally:

        print("Transaction log updated")

print(process_payment(-500))
```

☐ A. Payment Error: Invalid amount then Transaction log updated then -1

☐ B. Transaction log updated then -1

☐ C. Division Error then Transaction log updated then 0

☒ D. Payment Error: Invalid amount then -1 ✗

Your answer is incorrect.

The correct answer is: Payment Error: Invalid amount then Transaction log updated then -1

Question **8**

Incorrect

Mark 0.00 out of 1.00

Flag question

An SDET team maintains a test utility package with the following structure:

```
test_utils/
├── __init__.py      # contains: from .validators import check_status
├── validators.py    # contains: def check_status(code): return code == 200
└── reporters.py     # contains: def generate_report(data): return f'Report: {data}'
```

A test script runs the following code. What will be the output?

```
import test_utils

from test_utils.reporters import generate_report

print(test_utils.check_status(200))

print(test_utils.validators.check_status(404))

print(generate_report("PASS"))
```

☐ A. AttributeError: module 'test_utils' has no attribute 'check_status'

☒ B. True → False → Report: PASS ✗

☐ C. True → AttributeError: module 'test_utils' has no attribute 'validators' → Report: PASS

☐ D. False → True → Report: PASS

Your answer is incorrect.

The correct answer is: True → AttributeError: module 'test_utils' has no attribute 'validators' → Report: PASS

Question **9**

Correct

Mark 1.00 out of 1.00

Flag question

Which of the following is a valid Python comment?

☐ A. /* */

☐ B. <!---->

☐ C. //

☒ D. # ✓

Your answer is correct.

The correct answer is: #

Question **10**

Correct

Mark 1.00 out of 1.00

Flag question

An automation framework processes test results stored in a binary .dat file. Which open() mode is the correct choice, and what will f.read() return?

☐ A. "wb" — returns a bytes object after clearing the file

☒ B. "rb" — returns a bytes object ✓

☐ C. "br" — returns a bytearray object

☐ D. "r" — returns a string decoded using the default encoding

Your answer is correct.

The correct answer is: "rb" — returns a bytes object
